

1. **Introduction**

The purpose of this study is to investigate the effects of a new educational program on student performance. The program is designed to improve students' understanding of complex concepts and enhance their problem-solving skills. The study will focus on the following objectives:

- 1.1. To determine the effectiveness of the program in improving student performance.
- 1.2. To identify the factors that influence student performance.
- 1.3. To evaluate the impact of the program on students' learning outcomes.

The study will be conducted using a quasi-experimental design. The participants will be divided into two groups: a control group and an experimental group. The control group will receive the standard curriculum, while the experimental group will receive the new educational program. The data will be collected through pre-tests and post-tests.

The results of the study will be analyzed using statistical methods. The findings will be presented in a report that will be distributed to the relevant stakeholders. The study is expected to provide valuable insights into the effectiveness of the new educational program and its impact on student performance.

The study is expected to provide valuable insights into the effectiveness of the new educational program and its impact on student performance.
